ABSTRACT:

PROBLEM TO BE SOLVED: To provide a communication terminal that improves convenience, a portable terminal different from the communication terminal for notifying the incoming call to the communication terminal, and a portable

terminal system consisting of the communication terminal and the portable terminal different from the communication terminal.

SOLUTION: A data processing terminal 80 that is an ancillary terminal of a mobile telephone terminal 1 displays reception data (sender name and telephone number or the like) received from the mobile telephone terminal 1 on a display section 83 (83(a)) and activates a vibrator of a notice section. Thus, the user possessing a data processing terminal recognizes the incoming call by vibration of the vibrator and extracts the data processing terminal and views the display section to confirm the sender or the like, without the need for troublesome operations such as extracting of the large-sized mobile telephone terminal housed in a bag or the like.
